HIGHLIGHTS:

Senior Full Stack Developer and Technical Lead with 20+ years delivering enterprise-grade solutions across fintech, telecommunications, government, and security sectors. Specialist in Node.js, TypeScript, and cloud-native architectures (AWS, Azure), with deep experience designing microservices, real-time IoT platforms, and secure IAM frameworks. Proven track record leading cross-functional teams at organizations including TD Bank, Bell Canada, Deloitte, and the City of Toronto — consistently delivering scalable, WCAG-compliant, and PHIPA/AODA-ready systems on time. Adept at translating complex business requirements into clean, maintainable architecture and mentoring development teams toward engineering excellence.

SUMMARY:

Technical Summary:

- **Programming Skills:**
Proficient in Node.js, JavaScript ES6, PHP, Python, Java, and various frameworks such as Flask, Django, Laravel, Symfony, Vue, React, Next.js, Nest.js, Express.js, and TypeGraphQL
- **Data Storage:**
Experienced with MySQL, PostgreSQL, ElasticSearch, MongoDB, Redis, and Oracle.
- **Cloud Platforms:**
Proficient in AWS (S3, CloudFormation, CloudFront, Route53, ES2, RDS, RDS Aurora, Lambda Edge, WAF, Cognito, SQS) and Azure (SSO/MFA, ADFS, Azure Maps, AD, MSAL, AKS), Akamai
- **Containerization & Orchestration:**
- Skilled in Docker, Kubernetes, CI/CD, and DevOps including Azure DevOps and GitLab pipelines.
- **APIs & Architecture:**
- REST APIs, GraphQL/Apollo, Microservices, API Gateway, Kafka, IoT integrations.
- **Front-end Development:**
Proficient in HTML, CSS, Bootstrap, Tailwind, Quasar, Material UI, and jQuery.
- **Security & IAM:**
SAML 2.0, OAuth 2.0, MSAL, ADFS/MFA, JWT, OWASP, XSOAR
- **Accessibility:**
WCAG 2.0 AA, AODA compliance for enterprise web applications
- **Methodologies:**
Agile, OOP, Design Patterns, Microservices Architecture, Domain Driven Design (DDD).

EXPERIENCE

Founder & Lead Developer, Pulse HMS

Mar. 2026 – Present

Designing and building a multi-tenant Healthcare Management System (SaaS) from the ground up as an independent project, covering the full product lifecycle from architecture to deployment.

- Architected a multi-tenant SaaS platform with role-based access control across seven roles (Admin, Doctor, Nurse, Cashier, Lab Technician, Patient, Super Admin) using Clerk for identity management and Next.js 16 App Router.
- Designed and implemented a PostgreSQL schema with 30+ models covering appointments, treatment plans, billing, medical records, patient documents, and audit logging, using Prisma ORM with Prisma Accelerate for edge caching.
- Built field-level AES-256-GCM encryption for patient PII (date of birth, health card numbers, insurance data) stored at rest, with transparent encrypt/decrypt at the service layer.
- Implemented a real-time SSE notification system backed by Redis pub/sub for multi-instance delivery, supporting live appointment and task assignment events across all user roles.
- Developed a Stripe-integrated subscription billing engine with webhook-driven payment state, trial management, automated expiry notifications, and per-clinic package enforcement (staff limits, storage caps, AI feature flags).
- Integrated AI-powered features including insurance card OCR extraction and semantic patient search using the Anthropic Claude API with rate limiting via Redis sliding-window algorithm.
- Designed and enforced a multi-tenant security model with clinic-scoped Prisma queries, sliding-window rate limiting on all API routes, HSTS, CSP headers, and PIPEDA-aligned patient data handling.
- Built automated appointment reminder pipelines via Vercel Cron, document management with UploadThing, and a patient portal with GDPR-compliant data export.
- Maintained 80%+ test coverage across server actions, services, and API routes using Jest with full mock infrastructure.
- Used Graphify with Claude (Anthropic) to generate codebase knowledge graphs, improving context efficiency and reducing token usage during large-scale code analysis and development workflows.

Technology:

Next.js 16, React 19, TypeScript, Node.js, PostgreSQL, Prisma ORM, Redis, Clerk, Stripe, Anthropic Claude API, UploadThing, Resend, Sentry, Tailwind CSS, shadcn/ui, Zod, Vercel, Docker, Jest

Sr Developer/Lead, City of Toronto Park Forestry & Recreation*Mar. 2023 – Feb. 2026*

Led development of enterprise applications for asset management and operational tracking for Parks & Recreation.

- Architected and led the development of scalable software solutions using **Node.js**, embedding industry best practices such as design patterns, efficient resource management, optimized data structures, and RESTful API integration.
- Designed and implemented a Docker-based containerization strategy to streamline deployment, improve consistency, and simplify application management across environments.
- Provided technical leadership and mentorship to junior developers and team members, ensuring adherence to clean code principles and architectural standards.
- Directed the adoption and application of proven design methodologies, resulting in high-quality, maintainable, and efficient enterprise software.
- Engineered and integrated robust authorization frameworks using gates and policies to manage user access and enforce security across system resources.
- Developed and integrated AI-powered features using **LangChain** within a Node.js ecosystem to support intelligent workflows, data processing, and enhanced user interactions.
- Ensured all UI and public-facing components meet AODA and WCAG 2.0 AA accessibility standards.
- Built and maintained CI/CD pipelines using GitLab and Azure DevOps to automate testing and deployment.

Technology:

Node.js, JavaScript ES6, React, TypeScript, NestJS, GitLab CI/CD, DevOps, Oracle, Redis, Bootstrap, AWS, LDAP/IAM, OpenAPI, Docker/Swarm, Git, AODA, WCAG 2.0 AA accessibility compliance.

IoT Developer, Bell Canada*June. 2022 – Mar. 2023.*

Designed and developed IoT microservices enabling real-time telemetry ingestion and secure multi-tenant backend APIs.

- Built scalable Node.js microservices for assets, products, zones, and trailers APIs.
- Integrated COTS IoT platforms including Geotab, BeWhere, Azure ADX, and Azure Maps. Integrating with Geotab and BeWhere IoT devices to ensure seamless data exchange
- Designed caching and performance optimization strategies using Azure Data Lake and Redis.
- Implemented geospatial APIs and analytics using Azure Maps and Cosmos DB.
- Leveraged the power of Azure Maps to enhance location-based functionalities, enabling clients to make informed decisions based on geographical data.
- Developed secure authentication frameworks using OAuth 2.0, SAML 2.0, TYK Gateway, and RHSSO.
- Created GraphQL APIs to streamline data ingestion and processing.
- Automated CI/CD pipelines in Azure DevOps and deployed containerized services to AKS.

Technology:

Node.js, Express.js, TypeScript, MongoDB, Redis, Azure Cloud, ADX, CosmosDB, Azure Maps, Docker, Kubernetes (AKS), TYK API Gateway, RHSSO, OAuth 2.0, SAML 2.0, Kafka, GraphQL

Application Architect, TD Bank*Jul. 2021 – June 2022.*

As an Application Architect at TD Bank, I successfully led engineering teams in designing and implementing network defence enhancement and automation solutions that integrated with multiple security related APIs used by TD Bank.

- In this role, I was responsible for making executive software design decisions, acting as a designer, developer, and communicator, and evaluating existing workflows with the engineering team. Additionally, I designed and revised project structures and workflow diagrams, distributed development tasks to a team of software engineers, wrote code sections as part of the project, and signed TLS certificates using Akamai.

Technology: Python, Flask, XSOAR – (X Security Automation Orchestration Platform), TLS, ServiceNow API, Akamai CDN/API, CSR, Trust Chain, CA, Verizon API, Varnish API, Cryptography, TDD, Git, Access Management (IAM)

Sr. Developer, Paystone*Des. 2020 – Jul. 2021*

Developed a reputation management platform that seamlessly integrated automated payment processing, customer loyalty, gift card solutions, and reputation marketing.

- Utilized TypeScript with React for front-end development and Apollo/TypeGraphQL framework for back-end features.
- Designed and implemented microservices and Gateway API to ensure secure data access and services.
- Integrated Twilio API and short.io API for sending phone notifications.
- Implemented best practices for secure API design, code reviews, automated testing, and high-quality code.
- Ensured data representations modeled business objects in an extensible and performant manner.
- Implemented real-time bidirectional communication using WebSockets.

Technology: Node.js, TypeScript, React, Storybooks.js, Jest (Unit/Integration testing), GraphQL/Apollo, MongoDB, Mongoose, AWS, Twilio, short.io, Lambda Edge, S3, WAF, API Gateway, Cognito Access Management (IAM), JWT, OAuth 2.0, TypeGraphQL Framework, OpenApi, CI/CD, Webpack, Git, WebSockets

Technical Lead, Interpix Design Inc.*Jul. 2019 – Oct. 2020*

Led the development of cutting-edge SaaS products for scheduling services. My primary responsibilities included:

- Collaborating with product owners, UX/UI designers, and stakeholders to gain a clear understanding of application requirements (both functional and non-functional) and defining software system objectives based on these requirements.
- Creating and implementing an API to streamline task management, team coordination, and schedule organization.
- Utilizing Docker for containerized applications to ensure scalability and reliability.
- Enhancing single-page application security by integrating Microsoft Azure's MSAL authentication framework, ensuring secure multitenant user access.
- Developing RESTful APIs and guiding the team in adopting best practices and design patterns for scalable and maintainable software development.
- Developed Python/Flask AWS Data Pipelines for HBC Canada.
- Mentoring junior developers and providing technical guidance to the rest of the team as a Technical Lead.
- Implemented CloudFront web service to speeds up the distribution of your static and dynamic web content.

Technology:

Node.js, Vue with Material UI, JavaScript ES6, PHP, Laravel, CSS, SSO, MSAL Access Management (IAM), PostgreSQL, Redis, Docker, JSON Web Token (JWT), JWT, OAuth 2.0, AWS, Elasticsearch, Logstash, Kibana, Filebeat, OpenApi, Azure CI/CD, Python/Flask, AWS, Git, API Gateway, RDS Aurora, WebRTC

Sr. Developer, FCB/SIX Consulting*Jul. 2019 – Feb. 2020*

Creating innovative business and technology solutions.

- Dockized application, DevOps on AWS
Developed Node.js API as a micro-service for searching resources and its related proximity using Redis Geolocation for the ActToo site.
- Developed Node.js API for managing the BMW Welcome experience.
- Developed Python/Flask AWS ETL Data Pipelines for HBC Canada.
- Implemented CloudFront web service to speeds up the distribution of your static and dynamic web content using CDN and caching strategies.
- Developed Act Too proximity.
- To store pledges integrated Act Too with Ethereum JSON-RPC API for communicating with an Ethereum node and interacted with the Ethereum blockchain.

Technology:

Node.js, Express.js, JavaScript ES6, Python/Flask, REST API, MySQL, Redis Geolocation, MongoDB, Mongoose, Docker/ Kubernetes, Bitbucket/Jira, JWT, AWS, JWT, OAuth 2.0, GitLab CI/CD, Git, Ethereum JSON-RPC API, Cognito Access Management (IAM)

Sr. Full Stack Developer, Deloitte*Sep. 2015 – Jul. 2019*

Developed Treat Intelligence Assessment API to assist threat security analysts. Provided intelligence information to banking and government organizations on Thread Analysis, Vulnerabilities, Indicators of Compromise (IOC), Malware and SEIM.

- Build front-end UI using React.
- Developed REST Treat Intelligence Assessment API for collecting & exchanging emerging thread information globally on trends and attacks, providing world-class security operations capabilities.
- Implemented SSO/SLO on Azure with Deloitte Global ADFS/MFA.
- Dockerized app with Kubernetes and worked on CI/CD scripts
- Build micro-services with Node.js/Express for PGP Encryption of files and text, CVE, PDF Reports, Mongo/GridFS, and Threat Language Parser using Python/Flask.
- Integrated Security Information Event Management APIs, such as IBM QRadar, LogRhythm, TruStar, Splunk and Malware Information Sharing Platform (MISP).
- Designed and maintained CI/CD pipelines in Azure DevOps and Jenkins for secure enterprise deployments.

Technology:

Node.js, Express.js, React, JavaScript ES6, Python/Flask, Jira API, MySQL, ElasticSearch, Redis, MongoDB, Mongo GridFS, Docker/Kubernetes, Identity and Access Management (IAM), SSO/SLO ADFS/MFA SAML 2.0, GitLab CI/CD, OpenPGP, JWT, OAuth 2.0, DevOps, Jenkins, Java 11, Spring Framework, TDD, Git, Power BI.

Sr. Full Stack Developer/Architect, Zip Telecom*Apr. 2015 – Sep. 2015*

Designing API to work with the Number Portability Administration Center (NPAC) for transferring customer telephone numbers from one service provider to another.

- Developed REST API services for registering and transferring customer telephone numbers VOIP from one service to another.
- Integrated service for exchanging information for BLIF (White Pages) and E911.

Technology: JavaScript, PHP/Laravel, NGINX, MySQL, Jira, GIT, REST API, XML/SOAP, JWT, Redis Queues, AWS, Git

Sr. Application Developer, Infomart/Postmedia Network*Aug. 2012 – Apr.2015*

Developed software to provide monitoring solutions, and business intelligence to optimize media strategies for monitoring social media, online news, radio and television.

- Developed searching media using various criteria such as tag sets, tasks for Portfolio, Reports, and Source Libraries for news and media publishers.
- Design and developed a multi-website solution for Integration iHomeFinder MLS boards.
- Developed REST API for generation and management of Realtor MLS by automated creation of WP site on AWS with domain transfer/registration.

Technology: MySQL, PHP5, Laravel, jQuery, JavaScript, Bootstrap, JSON, High Charts, ElasticSearch, Memcached services, REST API, AWS: (EC2, Route53, S3, RDS Multi-AZ deployment, Cloud Formation, N, SQS), Jira, Confluence, Java Spring, Git, LDAP Identity and Access Management (IAM), JWT, OAuth 2.0

Sr. Application Developer, Devlin Architect*May. 2008 – Aug. 2012*

Devlin Architect is an award-winning interactive agency in Toronto specializing in brand-building strategy, experience design, and digital marketing services. As a member of the User Experience team, duties included:

- Developed Blacks photo portal website featuring editorial content, photo albums and photographs. This portal is similar to Flickr API that provides Black's customers a place to manage user photos, sharing albums and participate in community.
- Build middle tier multitenant meta-data driven API
- to integrate SOA Web services with SaaS Java backend, existing E-Commerce platform, Learning Section, and WordPress for Restful feature feed.

Technology: Java/Spring Framework, JavaScript, Oracle, REST Services, CAS service for Identity and Access Management (IAM), SSO, Social media networks, PHP, Unit Testing, TDD, Git

EDUCATION:

B.S. in Computing and Information Systems (Post Diploma)

Athabasca University

Diploma in Computer Programming and Analysis (3 years)

Seneca College of Applied Art and Technology
